Future Faster

INTRODUCING ELEVATE

Future Faster

# Build faster, build for the future, build with Elevate

The race is on to build data centre, HPC and AI facilities at scale internationally, in the shortest time possible, without compromising on performance, quality, and support.

Welcome to Elevate - high-density fibre, racks, duct, power, cooling, DCIM and security, designed for the future, delivered faster.

Products that Perform

Elevate's product portfolio is built for reliability, efficiency and scale.

From ultra high density fibre supporting 800G and beyond to intelligent racks and containment, each solution integrates seamlessly within your data centre. Every product is engineered to meet or exceed standards and is supported by a responsive, dependable supply chain.

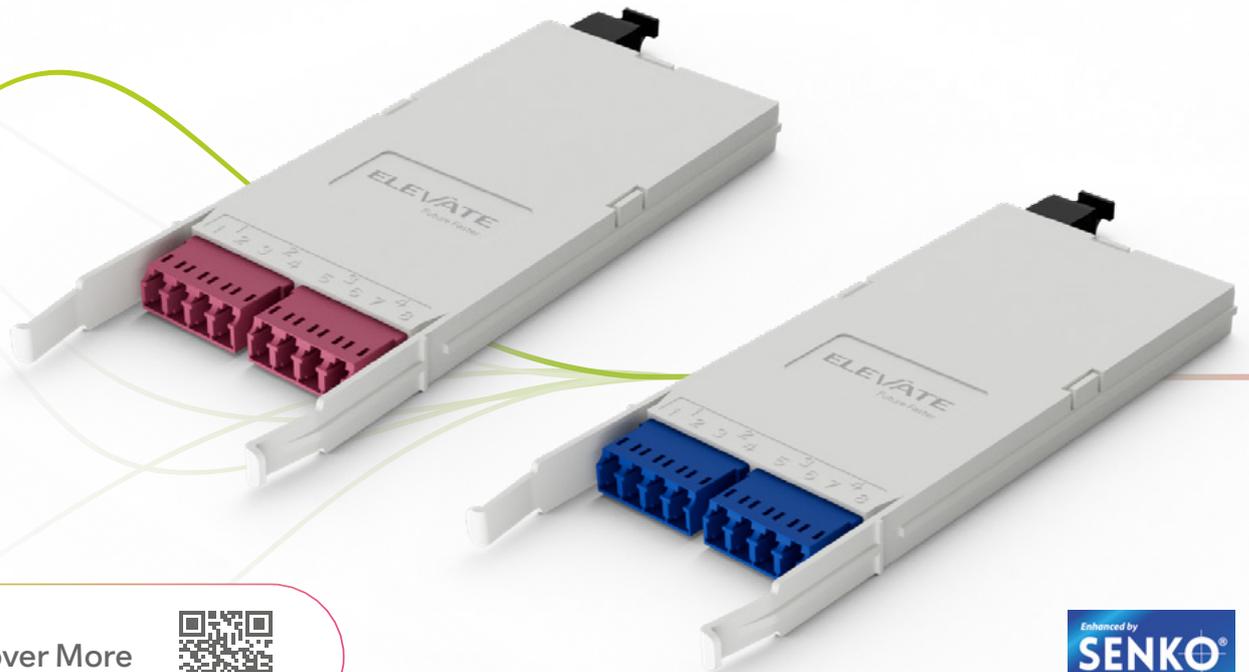

- Yellow Duct
- Aisle Containment
- iPDU / PDU
- Racks
- HD Fibre
- MD Fibre
- DCIM Software
- Security & Access Control
- Excel Infrastructure
- Liquid Cooling

Discover More

HD Fibre Solutions

Elevate High Density fibre solutions deliver
exceptional connectivity for bandwidth intensive,
future ready data centres.

Designed to support AI, cloud and next generation applications,
the system maximises fibre density - up to 3456 fibres in 1 U
of rack space - flexibility and scalability. Modular cassettes,
multiple connector options and clear migration paths ensure
your network is ready to grow as demand increases.

ELEVATE – FUTURE FASTER

MPO Assembly Configurator

MTP/MPO Systems.

HD fibre, including SN and
SN-MT technology.

Clean Cable Management.

Tested & Trusted.

Racks and Containment Solutions

Elevate racks and containment provide a robust, adaptable foundation for critical infrastructure.

Purpose built for data centre environments, the system optimises airflow, improves cable management and enhances security. With high load capacity, flexible sizing and hot or cold aisle compatibility, Elevate delivers performance today and scalability for tomorrow.

Discover More

DCR Configurator

Designed for Data Centres.

Integrated Cable Management.

Robust Construction.

Enhanced Airflow.

Fibre Duct Solutions
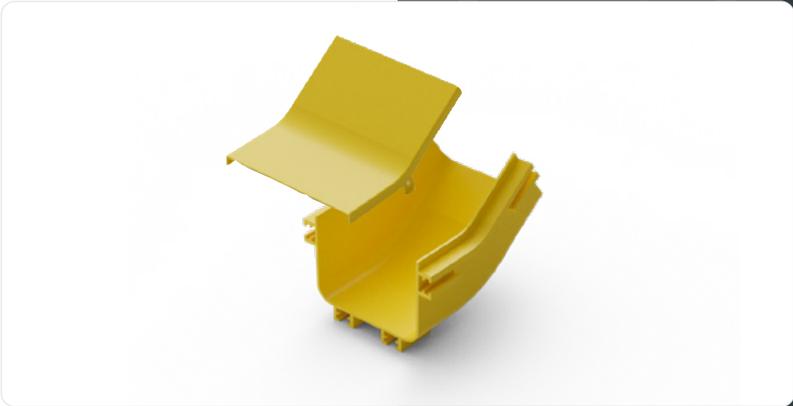

The Elevate Yellow Fibre Duct System provides safe,
organised pathways for critical fibre infrastructure.

Manufactured from LSZH, flame retardant materials, it minimises toxic
emissions in the event of fire. Modular, durable and fully compliant with
global regulations, Elevate fibre ducting protects signal integrity while
maintaining a clean, professional installation.

Discover More

Engineered for Fibre Protection.

Robust Construction.

Modular & Scalable Design.

Flexible Configuration Options.

Power Solutions

Elevate high density power solutions deliver precise control for AI, HPC and high performance computing environments.

Supporting up to 400A per rack, with modular busway systems and intelligent PDUs, these solutions scale easily as demand increases. Designed for rapid deployment and space efficiency, Elevate power keeps critical systems running reliably.

Discover More
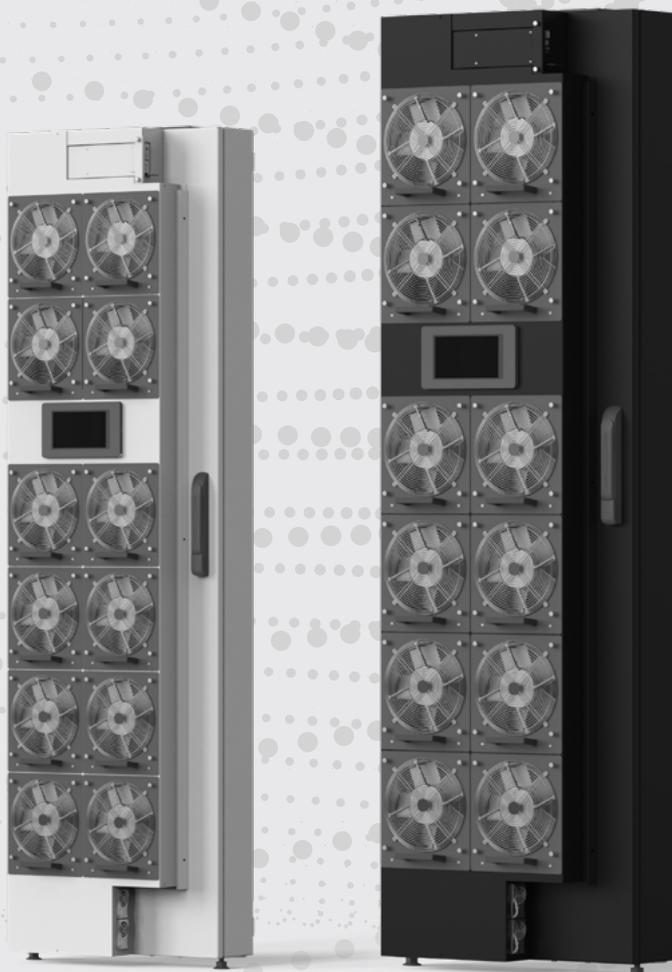

Cooling Solutions

In partnership with nVent, Elevate delivers liquid cooling solutions to meet the demands of next generation IT.

Designed for high density and AI workloads, these systems increase cooling efficiency, free up capacity and reduce energy consumption, without requiring complete data centre redesigns.

Rack-Level Cooling

Targeted cooling for high-density racks.

Row-Level Cooling

Efficient in-row solutions for contained environments.

Room-Level Optimisation

Airflow management and cooling distribution.

Enhanced Heat Dissipation

Liquid cooling removes heat more efficiently than traditional air cooling.

Sunbird Data Centre Infrastructure Management

Sunbird DCIM software enables intelligent,
unified management of data centre infrastructure.

Replacing spreadsheets and static diagrams, it provides real time visibility
across IT, facilities and operations. By integrating asset, power and
capacity data, Sunbird helps optimise utilisation, improve planning and
support smarter, data driven decisions. critical systems running reliably.

Discover More

Security Solutions

Elevate security solutions deliver comprehensive, multi layered protection for data centre environments.

These integrated systems safeguard critical assets while maintaining full operational visibility. Delivered through trusted partners, Elevate ensures robust physical security without compromising efficiency or user experience.

Intelligent CCTV

High-resolution camera systems for continuous surveillance, ensuring all areas of your data centre are monitored.

Access Control

Multi-layered access control systems, from proximity cards to keypads, to restrict access to sensitive areas.

Biometrics

Advanced biometric solutions such as fingerprint and iris scanning for the highest level of secure authentication.

AI Monitoring

Intelligent video analytics that use artificial intelligence to detect and alert to unusual activities, enhancing proactive security.

AVIGILON

Powered by partnerships

Elevate delivers more through carefully selected technology partnerships.

By integrating best-in-class solutions across power, cooling, security and software, we create fully interoperable data centre ecosystems. This collaborative approach simplifies procurement, accelerates deployment and ensures every solution works seamlessly from day one - backed by global expertise you can trust.

SCHLEIFENBAUER

Logistics That Deliver Faster

Powered by Mayflex and the global Sonepar Group, Elevate – Future Faster is built for the demands of mission-critical infrastructure.

Strategic stock holding, proven logistics networks, and disciplined supply planning deliver predictable lead times and dependable availability, helping data centre projects maintain programme momentum, reduce risk, and scale without compromise.

Why it matters

- ✓ Predictable lead times for programme critical infrastructure
- ✓ Proven logistics networks supporting complex DC deployments
- ✓ Stock availability aligned to project phasing
- ✓ Supply resilience that reduces risk and delays

Sustainability at the Core

Sustainability is embedded throughout Elevate solutions.

From plastic free and FSC certified packaging to energy efficient automation and recycled materials, our commitment helps reduce environmental impact without compromising performance. Backed by ISO 14001 certification and EcoVadis Silver recognition, Elevate supports responsible infrastructure design at every stage.
